

# *4 Seasons Blinds*

## *Conservatory Blinds*

**Technoshade** conservatory roof blinds is the only system that moves sideways, unlike our competitors that operate up and down. This gives us the following advantages.

**Easier to open and close** as blinds operate over a shorter distance.

**Easier to clean** as insects can be knocked or vacuumed down the pleats.

**No sag** the tendency for a blind to sag over large expanses will spoil the finished look of your conservatory roof. Our blinds never do this, they keep their shape perfectly.

**Fewer wires**, our competitors struggle to hold up long lengths of fabric with wires and cords everywhere, we require very few wires as our blinds use less fabric.

**Better fit**, we do not need the 100mm top rail required by other less advanced systems so we can cover your roof with virtually no gaps.

**No need for unreliable and messy motors** as blinds are much easier to operate.

**Call now for a free consultation with our design team on 01926 401123.**

The honeycomb fabric we use has both heat retentive and reflective properties, which makes it cool in the summer and warmer in the winter. We have a large range of colours to suit any décor with white on the reverse to provide a uniformed appearance when viewed from outside. The fabric's structure allows us to run the wires inside the fabric, so they are not visible. Conservatory side blinds can be fitted next to the glass giving a neat finish. This then stops the blind from clattering when the window is open. If our Smarter blind is not suitable we can offer our unique freehanging system, which you operate by chain to raise and lower.

*High quality blinds direct from the factory.*
